

LIVE FROM THE WARD

Participatory Design: Process & Techniques

My Part: Process & Techniques of PD

Goal: show *how* Participatory Design actually runs, step by step.

From one broken hospital app to a repeatable, teachable process.

The Problem – A Real-World Scenario

*Hospital IT, watching
the rollout*

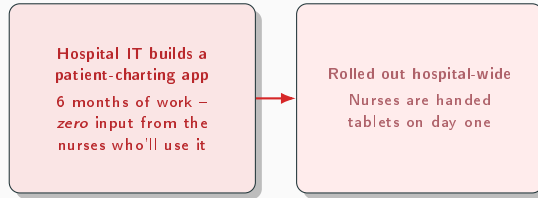

Hospital IT builds a
patient-charting app
6 months of work –
zero input from the
nurses who'll use it

The team never asked the one question that mattered: *“Would this actually work for the nurse holding the tablet?”*

The Problem – A Real-World Scenario

*Hospital IT, watching
the rollout*

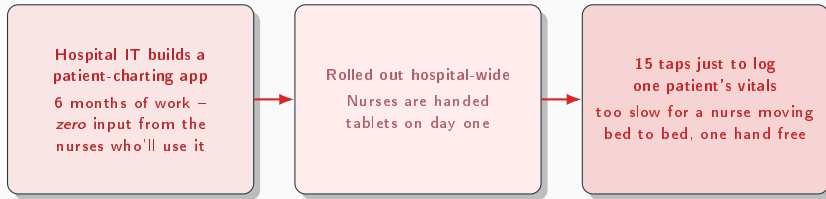

The team never asked the one question that mattered: *“Would this actually work for the nurse holding the tablet?”*

The Problem – A Real-World Scenario

Solution: Right Technique, Right Stage

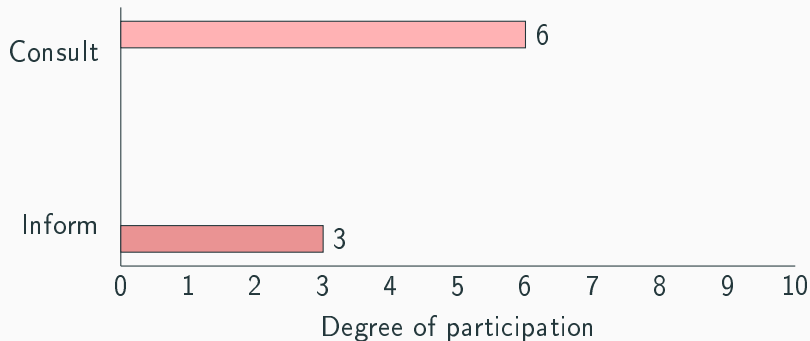

Process stage	Best-fit technique
Explore & Discover	Contextual interviews, shadowing
Co-design Workshops	PICTIVE, card sorting
Prototype	Personas-driven low-fidelity mock-ups
Evaluate	Think-aloud usability walkthroughs

Solution: How Deep Should Users Be Involved?

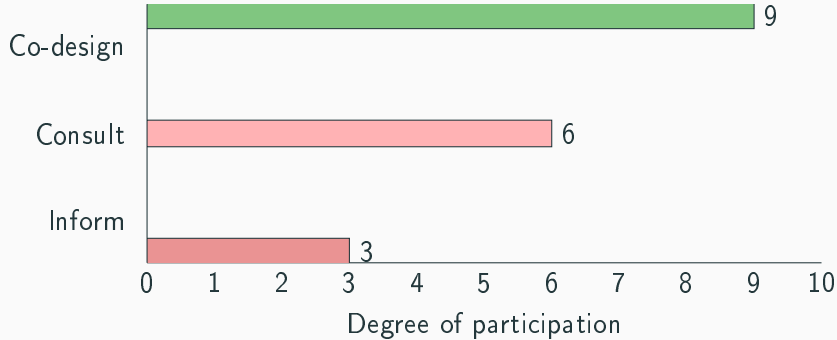

Participatory Design lives at the **Co-design** end of the spectrum.

Solution: How Deep Should Users Be Involved?

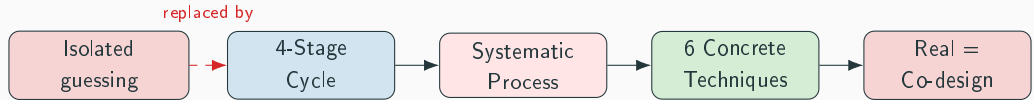

Participatory Design lives at the **Co-design** end of the spectrum.

Solution: How Deep Should Users Be Involved?

Participatory Design lives at the **Co-design** end of the spectrum.

Problem → Solved

Participatory Design turns the original problem – designing blind for users – into a repeatable process of designing with them.

Next: Tajrian will cover real-world applications, Benefits, Challenges and wrap up with our conclusions.

THE CENTRAL TAKEAWAY

DESIGNING BLIND

becomes

A REPEATABLE PROCESS

“Formalising Participatory Design as a process turns good intentions into something a team can actually repeat.”

THANK YOU

for listening
